

PHOTOGRAPHY, MINOR

Requirements for a minor may be completed at any campus location offering the specified courses for the minor. Students may not change from a campus that offers their major to a campus that does not offer their major for the purpose of completing a minor.

Program Description

Students in the Photography Minor will gain access to skills and knowledge necessary to identify and create professional quality photographic images. The learning outcomes include technical and intellectual proficiency, creative skills and capabilities, commercially oriented skills and knowledge, collaborative and visual communication skills and experiences, cultural awareness and ethical understanding regarding the use of images and life-long learning skills. It will raise students' overall level of proficiency and enhance their life-long learning skills in image making. Professional photographic skills are readily adaptable for use in a wide variety of majors and careers that rely on or benefit from the use of photography. The minor strengthens existing majors where making or using professional quality photographic imagery would be an advantage.

The minor is intended for students in any major who have a need or desire to acquire professional photographic skills and knowledge. The minor includes two prescribed classes, PHOTO 303 and PHOTO 404. These two courses focus students on client-based commercially oriented photographic skills and knowledge. Students are then free to choose the remaining 12 credits of additional PHOTO courses with the intent that with these courses they will tailor their curriculum to suit their specific need or interest. Students in the Photography Minor will thus benefit from access to the professionally oriented PHOTO courses developed for the Professional Photography (B.Des) major.

What is Photography?

Photography is a means of making images of the world in which we live and creating interpretations that cause us to think about what we see and to question what we know. Learning about photography, and how to take and make photographs, is like acquiring another language that increases your ability to communicate in a visual way. You acquire a range of technical and conceptual capabilities for documenting, expressing, and sharing information, ideas, views, and cultural perspectives, among many other intentions. Studying photography increases your practical and professional proficiencies as you create bodies of art and design work in a self-directed and independent manner that can be adapted to broad fields of inquiry. In this way, your photographic skills allow you to respond to content and subject matter with a personal perspective that expands how you acquire and integrate knowledge in critical and creative ways.

You Might Like This Program If...

You want to acquire the photographic skills and knowledge to strengthen your ability to create and adapt professional quality photographic images in your studies. Responding to the growing reliance on images and image making means applying technical, creative, and intellectual competencies and capabilities in a broad range of disciplines and a wide variety of careers. This minor will enhance your ability to communicate visually and acquire life-long learning skills.
